

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

February 3, 1975

Mr. Donald Jacangelo
Senior Fisheries Biologist
Pollution Unit
Bureau of Fisheries Laboratory
Lebanon, New Jersey 08833

Dear Mr. Jacangelo:

The analysis of the liquid sample collected by
you from the L. E. Carpenter Company is as follows:

The top layer consisted of a mixture of an aromatic
hydrocarbon solvent blend and high boiling phthalate
esters. The aromatic solvent blend was mainly an xylene
mixture plus smaller amounts of toluene and C₃ substituted
alkyl benzenes. Traces of paraffins were also present.
The mercury content of the sample was 6 µg/l.

Sincerely yours,

Michael V. Polito
Hazardous Material Consultant
Emergency Response & Inspections Branch
